

Barb EQ

Thank you for purchasing the Barber Barb EQ. The Barb EQ will allow guitar players to add classic “tone stack” sounds to their existing amplifier; we feel the Barber EQ works best with tube amps with a single tone control or no tone controls at all. The controls on the Barb EQ are the fairly standard Volume, Treble, Middle, Bass. The Barb EQ also has a three way toggle that selects the style of EQ:

Toggle left= 59 high power Tweed style EQ

Toggle middle= 60’s Blackface style EQ (midrange turned all the way down for stock blackface setting)

Toggle right= late 60’s British amp head style EQ.

The midrange control has a push/pull switch that when “pulled up” gives you the sounds of the bright input on the tweed and British amps.

The Barb EQ midrange control is slightly more active than the vintage tone stacks to give you a wider range without any loss of tone, because of this you should start with the midrange control at its minimum setting, this will work very well for most tones.

The Barb EQ accepts a 9 volts battery or can be powered by a **9 volt DC negative tip** supply. Please **do not use a supply over 9 volts DC, damage will result.**
